

TRG806X RADAR LEVEL MITTER-26GHz

Operating Manual

TRG806X-DT-JS-1007-2018(A)

PREFACE

Thank you for choosing the products of Dandong Top Electronics Instrument (Group)-Co.,Ltd. This operation manual provides you with important information on installation, connection and commissioning as well as on maintenance, troubleshooting and storage.

Please read it carefully before installation and commissioning and keep it as part of the product near the meter for easy reading.

This manual can be downloaded by entering the version number at www.ddtop.com. If the instructions are not followed, the protection provided by the meter may be destroyed.

Trademark, Copyright and Restriction Instructions

Dandong Top Electronics Instrument (Group) Co.,Ltd.®, Dandong Top Pump Co.,Ltd.®, DDTOP® are registered trademarks of the company.

The performance specifications of the meter are effective as of the date of publication and are subject to change without notice. Dandong Top Electronics Instrument (Group)Co.,Ltd. reserves the right to modify the products described in this manual at any time without prior notice.

Quality Assurance

Dandong Top Electronics Instrument (Group) Co.,Ltd. guarantees that all variable area flow meters have no defects in materials and manufacturing processes within one year from the date of delivery. During the warranty period, if the product returns with quality problems and the claim is determined by the manufacturer to be within the scope of warranty, Dandong Top Electronics Instrument (Group) Co.,Ltd. is responsible for repair or replacement of the buyer (or owner) free of charge. Dandong Top Electronics Instrument (Group) Co.,Ltd. is not responsible for the costs caused by improper use of equipment, labor claims, direct or subsequent damage and installation and use of equipment. In addition to the special written warranty certificate for certain products of Dandong Top Electronics Instrument (Group) Co.,Ltd., Dandong Top Electronics

Instrument (Group) Co.,Ltd. does not provide any express or implied warranty.

Quality

Dandong Top Electronics Instrument (Group) Co.,Ltd. has passed the ISO9001 quality system certification. The whole process of product production is strictly in accordance with the scope of the quality system, providing the strongest guarantee for product and service quality.

1. Safety Tips

For safety reasons, it is expressly prohibited to modify or change the product without authorization. Repair or replacement is only allowed to use the accessories specified by the manufacturer.

1.1 The explosion may cause death or serious injury.

When installing the device in an explosive environment, be sure to comply with applicable local, national and international standards, codes and regulations. Ensure that the equipment is installed in accordance with intrinsically safe or non-flammable site operating procedures.

1.2 Process leakage may cause serious injury or death.

If the process seal is damaged, the medium may leak at the connection.

1.3 Failure to follow the safety installation guidelines may result in death or serious injury. All operations described in this manual must be carried out by trained and qualified or end-user-appointed personnel.

2. Product Descriptions

2.1 Main structure-Figure 1

Figure 1 Product Main Structure

- 1. Transmitter, with circuit board module inside
- 2. Sealing component, with sealing structure inside
- 3. Flange, with flange installation on site
- 4. Antenna, selected according to site conditions

2.2 Working Principle

The radar antenna emits a very short microwave pulse with very low energy. The pulse propagates in space at the speed of light and meets the surface of the measured medium. Part of its energy is reflected back and received by the same antenna. The time interval between the transmitted pulse and the received pulse is proportional to the distance from the antenna to the surface of the measured medium, so that the distance from the antenna to the surface of the measured medium is calculated.

2.3 Packaging

Please send packaging waste to a special recycling agency.

2.4 Lifting and Transportation

Please use quality lifting equipment and lifting straps, and pay attention to safety.

2.5 Storage

Storage temperature -20°C~40°C

Storage humidity≤40%

3. Technical Parameters

3.1 Key Performance

Power Supply: (16 ~ 36) V DC (two-wire)

Output: 4 ~ 20mA

Blind Zone: 300mm

Transmission Frequency: 26GHz

Structure: Rod antenna, horn antenna, process sealed antenna, parabolic antenna

Figure 2 Two-wire Load Resistance Diagram

3.2 Appearance and Performance Parameters

TRG8061- Apperance	TRG8061-Performance parameter				
	Antenna structure: rod type				
	Application conditions: suitable for strong corrosive liquids				
	Measuring range: 10m				
	Measurement accuracy: ±5mm or 0.1%FS (whichever is greater)				
	Process temperature: $(-40 \sim 130)^{\circ}$ C				
	(-40 ~ 180) ℃				
-	Process pressure: (-0.1 ~ 0.3) MPa				
TRG8062- Apperance	TRG8062- Performance parameter				
	Antenna structure: horn type				
	Application conditions: temperature-resistant,				
	pressure-resistant, slightly corrosive liquid				
	Measuring range: 30m				
	Measurement accuracy: ±3mm or 0.1%FS (whichever				
	is greater)				
	Process temperature: $(-40 \sim 150)^{\circ}$ C				
	(-40 ~ 250) ℃				
	Process pressure: (-0.1 ~ 4.0) MPa				

TRG8063- Apperance

Antenna structure: process sealed Application conditions: suitable for strong corrosive, temperature resistant, pressure resistant, sanitary liquid Measuring range: 20m Measurement accuracy: ± 10 mm or 0.1%FS (whichever is greater) Process temperature: $(-40 \sim 130)^{\circ}$ $(-40 \sim 250)^{\circ}$ Process pressure: $(-0.1 \sim 1.0)$ MPa

TRG8064 - Apperance

TRG8064 - Performance parameter

TRG8063-Performance paramete

Antenna structure: parabolic Application conditions: small dielectric constant liquid and solid, large range and ultra-large range measurement Measuring range: 70m Measurement accuracy: ± 10 mm or 0.1%FS (whichever is greater) Process temperature: (-40 ~ 150)°C Process pressure: (-0.1 ~ 4.0) MPa

3.3 Explosion-proof Mark

Passed the national explosion-proof certification, certification mark:

Intrinsically safe Ex ia IIC T1 ~ T5/T6 Ga; Ex iaD 20 T85°C

Intrinsically safe and flameproof composite type Ex d ia [ia Ga]IIC T1 ~ T5/T6 Gb; Ex tD A21 T100°C

/T85℃

3.4 Executive Standard

JB/T 13252-2017 Microwave (radar) level transmitter;

5. Unpacking and Inspection

5.1 Precautions for Unpacking Inspection

5.1.1 Check whether the product nameplate (Figure 4) is consistent with the supply list information

Radar	Level Transmitter
Model:	
Explosion-proof: Exia IICT1	~T5/T6 Ga; Exia D20 T85℃
Explosion-proof No.: CCI	RI 17.2020X
Explosion-proof: Exd ia[i Ex tD A	a Ga] Ⅱ C T1~T5/T6 Gb 21 T100℃/85℃
Explosion-proof No.: CC	RI 18. 1038X
Output: 4~20mA+HART	Accuracy:
Antenna Type:	Connection Type:
Ambient Temperature: -40	~80°C(T1~T5)/-40~60°C(T6)
Ingress Protection: IP67	Medium Name:
Working Pressure: Mpa V	Vorking Temperature: °C
Measuring Range:	Tag No.
Manufacture No.	Manufacture Date :
Dandong Top Electronics In	strument (Group) Co.,Ltd

Figure 4 Product Nameplate

5.1.2 Check the quantity and material of each part against the packing list.

5.2 Content of Inspection

5.2.1 Check whether the appearance of the meter is defective or damaged.

6. Installation

6.1 Installation Tool

Tools suitable for process connections like wrenches, flange gaskets and flange bolts.

6.2 Installation Technical Requirements

Installation Location
WWW.DDTOP.COM

During installation, take care to maintain a distance of at least 300 mm between the instrument and the vessel wall, as shown in Figure 5.

- ①-Datum plane;
- ②-The center of the container or the axis of symmetry.

Figure 5 Schematic Diagram of Installation Position

For a cone-shaped container with a flat tank top, the best installation position of the meter is the center of the top of the container, so that the bottom of the measuring container can be ensured, as shown in Figure 6.

Figure 6 Diagram of Installation Position of Cone Bottom Tank

Moisture proof

For installation in an outdoor or humid room and on a cooling or heating tank, in order to prevent moisture, the cable gland should be tightened, and the cable should be bent downward at the inlet,

as shown in Figure 7.

Figure 7 Diagram of Moisture-proof Wiring

Container Tube Connection

The length of the container nozzle should be as long as possible to ensure that the end of the antenna extends into the tank, as shown in Figure 8.

Figure 8 Diagram of Container Connecting Pipe Connection

7. Instrument Configuration

7.1 Electrical Wiring

According to the wiring shown in Figure 9 below, terminal 2 is connected to 24VDC positive, and terminal 1 is connected to 24VDC negative.

Figure 9 Electrical Wiring

7.2 Configuration Operation Process

7.2.1 Diagram of Parameter Setting-Figure 10

The reference surface of the measurement is the sealing surface of the thread or flange

- ① -Blind area;
- 2 -Range setting;
- ③ -High level adjustment;
- ④ -Low level adjustment

Figure 10 Diagram of Parameter Setting

7.2.2 Introduction to Operation Interface-Figure 11

There are 4 buttons on the instrument panel (Figure 11), and the instrument can be configured through the 4 buttons. The language of the configuration menu is optional. After configuration, the LCD screen displays the measured value, and the measured value can be read out very clearly

through the glass window.

Figure 11 Instrument Panel

			content	display		modificatio	on

Basic Settings

The basic settings include the basic parameters of the instrument: low level adjustment, high level adjustment, material properties, damping time, output mapping, calibration unit, calibration, blind zone range, sensor label.

Display

Display and set the display mode, display content and LCD contrast of the instrument.

Diagnose

Diagnosis completes the inspection and testing functions of the instrument. Mainly include: measuring peak value, measuring state, selection curve, echo curve and simulation.

Service

Including false echo, current output, reset, measurement unit, language, HART working mode, copy sensor data and password.

Information

Basic instrument information such as product model, serial number, production date, and software version.

Programming method

When the instrument is running, press the OK key to enter the programming state and display the programming main menu. After editing each parameter, press OK to confirm, otherwise the editing is invalid. After finishing editing, press BK key to exit programming state and return to running state. At any time during programming, you can press BK key to abandon programming and exit the parameter item programming state.

7.2.3 Configuration steps

Basic settings

Basic settings include the settings of main instrument parameters, such as range, material properties, damping time, etc. In the running state, press the OK key to enter the programming state, the LCD displays the main menu, as shown in Figure 12-1 Basic Settings

12-1 Basic Setting

Low Level adjustment

Low level adjustment is used for range setting. Together with the high level adjustment, it

determines the ratio of the current output linear corresponding relationship. In the main menu, when the menu number is 1, press the OK key to enter the basic setting sub-menu, LCD display, as shown in Figure 12-2 low adjustment.

12-2 Low Level Adjustment

Press OK to enter the programming low percentage, refer to the character/number parameter programming method in the parameter editing method to edit the percentage value and distance value. After editing, press OK key to confirm, press BK key to abandon programming.

High Level Adjustment

High level adjustment is used for range setting. Together with the low level adjustment, it determines the ratio of the current output linear corresponding relationship. When the menu number of the LCD display is 1.1, press the key • to enter the high position adjustment, and the LCD display is shown in Figure 12-3.

12-3 High Level Adjustment

At this point, press the OK key to edit the high adjustment.

Material Property

When the LCD display menu number is 1.2, press the key • to enter the material property programming, and the LCD will display, as shown in Figure 12-4. The material properties menu is used to select solid, liquid or micro DK, so as to further determine other properties of the material that affect the measurement.

Figure 12-4 Material Property

Damping time

When the LCD display menu number is 1.3, press the key • to enter the damping time setting menu, the LCD displays, as shown in Figure 12-5 damping time.

12-5 Damping Time

Press the OK key to enter the parameter editing state, use the ↑ key to set the number, use the key
to select the edit digit, and press the OK key to confirm after editing.

Range setting

In order to get the correct measurement results, you need to set the range of the meter. When the menu number is displayed as 1.7, press the key 🔹 to enter the range setting menu, and the LCD will display, as shown in Figure 12-6.

12-6 Measuring Range Setting

Press the OK key, the corresponding parameter \pm or reverse black, use the \uparrow or key \clubsuit to set the parameter, and press the OK key to confirm.

Display

This function is used for display mode programming. When the LCD displays the main menu, press the key • to move the arrow to the display item, and the LCD will display as shown in Figure 12-7. Press the OK key to enter the display mode programming.

Display content

Enter display mode programming, LCD display, as shown in Figure 12-8.

12-8 Display Content

The parameter indicating the current display content is the empty height, that is, the meter displays the measured empty height value. Press the OK key to enter the editing state, and the LCD will display, as shown in figure 12-9.

12-9 Display Empty Height

Use the key • to move the arrow to the desired parameter item and press OK to confirm. When editing is complete, press the BK key to exit display programming and return to the previous menu.

Service

The service menu includes more specialized functions. Mainly include false echo learning, time-varying gain control, reset and instrument parameter storage. When the LCD displays the main menu, press the key • to move the arrow to the service item, and the LCD displays, as shown in Figure 11-11 Service.

False Echo

When there is a fixed obstacle in the measurement range that interferes with the measurement, the false echo learning function can be used to overcome its influence. When the main menu is displayed on the LCD and the menu number is 4, press the OK key to enter the service submenu, and the LCD will display as shown in Figure 11-12 false echo.

12-11 False Echo

Press the OK key, the LCD will display, as shown in Figure 12-12, the false echo sub-menu.

12-12 False Echo Submenu

If you it is needed to update/create a new false echo curve, press the • key, move the arrow to the current new entry, press OK to confirm, and the LCD will display, as shown in Figure 12-13.

12-13 False Echo Update

Prompt to enter the true echo distance value. After entering the distance value, press the OK key to confirm. Please wait for the LCD display.

8. Precautions

8.1 Make sure that the power supply is safe and reliable. The power supply must be connected in accordance with the correct positive and negative poles, and the ground terminal of the transmitter must be reliably grounded.

8.2 When installing the radar level transmitter, be careful not to install it above the material flow. If it is unavoidable, it is recommended to install a still-wave tube or bypass tube for easy measurement; 8.3 When installing, ensure that the radar antenna is perpendicular to the surface of the measured medium, connect the radar to the tank flange, and tighten the fixing bolts with tools;

8.4 The operating temperature range of electronic components is $-40^{\circ}C^{+}80^{\circ}C$, and the temperature range displayed on the LCD screen is $-20^{\circ}C^{+}80^{\circ}C$ (the LCD does not display beyond the range, and the remote transmission is normal);

8.5 After configuration, tighten the display and power cover to prevent the meter from getting wet.

9. Fault Analysis and Troubleshooting

Fault Phenomen	on (Cause of Failure	Solution		

	FETY			
E14	Weak echo, or no echo	 The possible reasons for this phenomenon are: 1. The radar horn antenna is blocked; 2. The feed is too full and enters the blind zone; 3. The low adjustment value of the meter is set less than the actual tank height; 4. There is high frequency AC ripple interference in the DC 24VDC power supply, and the echo baseline is too high; 5. The meter itself is a problem. 		
No display	Power failure or bad display, or delayed display	Check the power supply module, display module, check whether the explosion-proof cavity is broken and whether there is a normal voltage output		
Value jump	There is interference, there are false echoes	Check working conditions, installation location, and perform false echo learning.		
Deviation from the host computer measurement	The host computer parameter setting is wrong, the line transmission failure	The settings of the host computer should be consistent, replace the transmission cable		
The false echo is generated before the real wave	There are obstacles in the measurement range, and the interference wave is caused by the obstacles	If the obstacle is fixed within the measurement range, the problem can be solved by changing the installation position, raising the amplitude of the envelope and learning the false wave.		
The false echo is generated after the real wave	Multiple echoes produced by radar waves hitting an irregular reflecting surface	The problem can be solved by adjusting the installation position of the meter, raising the envelope amplitude and strengthening the first wave.		
The transmitter echo shows a straight line to report E14	It may be caused by the low setting value being smaller than the empty position, the antenna blockage and the malfunction of the watch core	The problem can be solved by increasing the low setting value, cleaning the meter antenna and replacing the meter core.		
The transmitter shows E15, E17 failure	Caused by instrument hardware failure	The problem can be solved by returning to the factory for repair		
Echo baseline height displayed on the meter header	It may be caused by high frequency AC interference in the power supply circuit and the current feedback circuit	The problem can be solved by independent wiring of the power supply circuit or current feedback circuit, or by installing an isolation module.		
The transmitter shows negative numbers	The low adjustment value of the "basic setting" inside the instrument is set less than the actual tank height, and the actual current output is 4 mA, which is zero.	Set the low-position adjustment value item to be consistent with the tank height;		
The meter crashes during measurement	The meter needs to be reset	Reset the meter and set the relevant parameters. The additional parameter items "large pile angle" and "dust intensity" in the "material properties" item are treated by default. Just set "No".		

10. Disassemble

10.1 Warning

Before disassembly, attention should be paid to hazardous process conditions, e.g., pressure inside the vessel, high temperature, corrosive or toxic medium

10.2 Waste Removal

Please follow the current regulations in each region for waste disposal.

11. Product Certification
